

Antimony-Based Focal Plane Arrays for Shortwave-Infrared to Visible Applications, Phase I

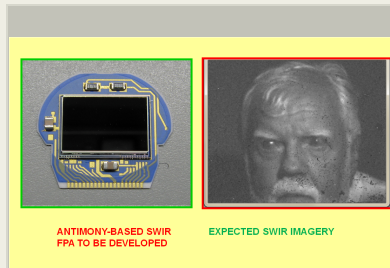

Completed Technology Project (2015 - 2015)

Project Introduction

We propose to develop antimony-based focal plane arrays (FPAs) for NASA's imaging and spectroscopy applications in the spectral band from visible to shortwave-infrared, viz. wavelengths from 0.5 - 2.5 microns. We will leverage recent breakthroughs in the performance of midwave and longwave infrared FPAs based on the InAs/GaSb/AlSb material system in which QmagiQ has played a key part. In these spectral bands, this novel sensor already offers performance comparable to mercury cadmium telluride (MCT) but at a fraction of the cost due to the leveraging of commercial growth and process equipment. Our goal is to extend that benefit into the shortwave infrared. Using the best material currently available and a novel bandgap-engineering design and process, we will fabricate FPAs and measure how the antimony-based sensor compares to state-of-the-art shortwave MCT in terms of quantum efficiency and dark current. In Phase I, we will develop and deliver a small-format FPA. In Phase II, we will further improve performance and develop and deliver megapixel FPAs for evaluation for NASA's astronomy and planetary missions.

Organizational Responsibility

Responsible Mission Directorate:

Space Technology Mission Directorate (STMD)

Lead Organization:

QmagiQ, LLC

Responsible Program:

Small Business Innovation Research/Small Business Tech Transfer

Project Management

Program Director:

Jason L Kessler

Program Manager:

Carlos Torrez

Principal Investigator:

Mani Sundaram

Technology Maturity (TRL)

Start: 2
Current: 4
Estimated End: 4

Antimony-Based Focal Plane Arrays for Shortwave-Infrared to Visible Applications, Phase I

Completed Technology Project (2015 - 2015)

Technology Areas

Primary:

- TX08 Sensors and Instruments
 - └ TX08.1 Remote Sensing Instruments/Sensors
 - └ TX08.1.1 Detectors and Focal Planes

Target Destinations

The Sun, Earth, The Moon, Mars, Others Inside the Solar System, Outside the Solar System
